

3 STEPS TO YOUR HAPPY PLACE

1. Remove the rubber cap(s) from the ends of your High Desert Pure Pen atomizer.

** You can toss them or use them as stylish hats for your hedgehog!*

2. Screw battery* to the bottom, threaded-side of the atomizer (See diagram 1)

** Although the atomizer works with most common pen batteries, we recommend you use a High Desert Pure (HDP) battery. Make sure battery is properly charged. Battery sold separately unless included as a kit.*

3. Press battery button while inhaling from mouthpiece for a few seconds —voila! Have fun visiting your happy place!

The less time you are fussing with your High Desert Pure Pen, the more time you can spend in your Happy Place! Here are some useful notes & tips to help maximize your experience.

OIL NOTES: High Desert Pure craft cannabis oil has been designed to work in atomizers without the use of any flow agents. For optimal performance and flavor, it is best to avoid extreme temperatures.

TIP! Don't store your pen in a hot car, near heated surfaces, or in direct sun for long periods of time. Pockets are a cozy and safe place for HDP atomizers, keeps the oil at the perfect temperature.

What about cold temperatures? Part of the beauty of the HDP atomizer is that it works great even if the oil is cold. (Can other pens say that? Nope.) Craft cannabis oil this good deserves awesome hardware.

PURE PEN NOTES & TIPS

BATTERY NOTES: Using a HDP battery is highly recommended, because it is paired with our atomizers to provide the perfect atomizing temperature for optimal flavor. Other 510 threaded batteries may work but may not provide the ideal heat. Air actuated batteries don't work with this atomizer.

TIP! To avoid overheating and possible clogging of the atomizer, we recommend you deactivate your battery when not in use. This keeps it from accidentally turning on in your pocket

Charging The Battery:

1. Screw battery into USB charger (included with battery)

2. Plug USB prong into laptop USB port or USB charging station or USB phone charger

3. Green light on USB charger indicates battery is ready

DIAGRAM 2

Battery Button Controls:

5 Clicks turns battery ON or OFF (Press & hold button to heat atomizer)

3 Clicks changes voltage:

Flashing **GREEN** = LOW HEAT (Best Flavor!)

Flashing **BLUE** = MEDIUM HEAT

Flashing **RED** = HIGH HEAT

Flashing **WHITE** = See Troubleshooting

2 Clicks preheats battery for 8 seconds

DIAGRAM 3

TROUBLESHOOTING CHECKLIST

WEAK HITS

- Recharge battery, it may be low (See diagram 2)
- Adjust the battery voltage (See diagram 3)

PEN NOT WORKING

- Make sure battery has good connection and is screwed to atomizer properly
- If your battery flashes white, charge it. If you have a new battery or you just charged it, try unscrewing the atomizer very slightly from either the battery or between the base and top portions of the atomizer.
- Use a HDP battery (Non-HDP batteries are not recommended; air-actuated batteries don't work with this atomizer)
- Atomizer may be clogged. Hold power button down for a few seconds to warm the clog.
